TeX User Group Meeting 2024, July 2024, Prague, Czechia

What is arXiv?

arXiv is a free distribution service and an open-access archive for nearly 2.4 million scholarly articles in the fields of physics, mathematics, computer science, quantitative biology, quantitative finance, statistics, electrical engineering and systems science, and economics. Materials on this site are not peer-reviewed by arXiv.

arXiv News

Stay up to date with what is happening at arXiv on our blog.

Latest news

Physics

- **Astrophysics** ([astro-ph new](#), [recent](#), [search](#))
includes: Astrophysics of Galaxies; Cosmology and Nongalactic Astrophysics; Earth and Planetary Astrophysics; High Energy Astrophysical Phenomena; Instrumentation and Methods for Astrophysics; Solar and Stellar Astrophysics
- **Condensed Matter** ([cond-mat new](#), [recent](#), [search](#))
includes: Disordered Systems and Neural Networks; Materials Science; Mesoscale and Nanoscale Physics; Other Condensed Matter; Quantum Gases; Soft Condensed Matter; Statistical Mechanics; Strongly Correlated Electrons; Superconductivity
- **General Relativity and Quantum Cosmology** ([gr-qc new](#), [recent](#), [search](#))
- **High Energy Physics - Experiment** ([hep-ex new](#), [recent](#), [search](#))
- **High Energy Physics - Lattice** ([hep-lat new](#), [recent](#), [search](#))
- **High Energy Physics - Phenomenology** ([hep-ph new](#), [recent](#), [search](#))
- **High Energy Physics - Theory** ([hep-th new](#), [recent](#), [search](#))
- **Mathematical Physics** ([math-ph new](#), [recent](#), [search](#))
- **Nonlinear Sciences** ([nlin new](#), [recent](#), [search](#))
includes: Adaptation and Self-Organizing Systems; Cellular Automata and Lattice Gases; Chaotic Dynamics; Exactly Solvable and Integrable Systems; Pattern Formation and Solitons
- **Nuclear Experiment** ([nucl-ex new](#), [recent](#), [search](#))
- **Nuclear Theory** ([nucl-th new](#), [recent](#), [search](#))
- **Physics** ([physics new](#), [recent](#), [search](#))
includes: Accelerator Physics; Applied Physics; Atmospheric and Oceanic Physics; Atomic and Molecular Clusters; Atomic Physics; Biological Physics; Chemical Physics; Classical Physics; Computational Physics; Data Analysis, Statistics and Probability; Fluid Dynamics; General Physics; Geophysics; History and Philosophy of Physics; Instrumentation and Detectors; Medical Physics; Optics; Physics and Society; Physics Education; Plasma Physics; Popular Physics; Space Physics
- **Quantum Physics** ([quant-ph new](#), [recent](#), [search](#))

Mathematics

- **Mathematics** ([math new](#), [recent](#), [search](#))
includes: (see detailed description) Algebraic Geometry; Algebraic Topology; Analysis of PDEs; Category Theory; Classical Analysis and ODEs; Combinatorics; Commutative Algebra; Complex Variables; Differential Geometry; Dynamical Systems; Functional Analysis; General Mathematics; General Topology; Geometric Topology; Group Theory; History and Overview; Information Theory; K-Theory and Homology; Logic; Mathematical Physics; Metric Geometry; Number Theory; Numerical Analysis; Operator Algebras; Optimization and Control; Probability; Quantum Algebra; Representation Theory; Rings and Algebras; Spectral Theory; Statistics Theory; Symplectic Geometry

Computer Science

- **Computing Research Repository** ([CoRR new](#), [recent](#), [search](#))
includes: (see detailed description) Artificial Intelligence; Computation and Language; Computational Complexity; Computational Engineering, Finance, and Science; Computational Geometry; Computer Science and Game Theory; Computer Vision and Pattern

What is arXiv

- ▶ arXiv (arxiv.org) is the world's oldest and largest scientific preprint server
- ▶ Started in 1991
- ▶ Presently housing nearly 2.4 million articles
- ▶ Accelerating growth

- ▶ Examples for cutting edge research **first** made available on arXiv:
 - ▶ LLM research (OpenAI, Deepmind, etc.)
 - ▶ LIGO (Gravity wave research; 2017 Nobel Prize in physics)
 - ▶ Proofs of famous theorems (Grigori Perelman)
- ▶ While most papers posted to arXiv are eventually published in journals, in some fields research is often made available only on arXiv
- ▶ And even for work subsequently published in journals, early posting to arXiv enables scientists to more rapidly incorporate shared results, and assert prior authorship

arXiv tries to be as “open” as possible:

arXiv tries to be as “open” as possible:

Open Science

arXiv tries to be as “open” as possible:

Open Science

Open Source

arXiv tries to be as “open” as possible:

Open Science

Open Source

“Open Access”

Improving accessibility – different talk

No paywall – open access to all articles

Sources of most articles are available (about 90%)

Thanks to Paul Ginsparg et al. for insisting from the start in 1991 that scientists submit the source code for their papers!

te \TeX and \TeX Live <https://tug.org/texlive>

Type setting system \TeX and \LaTeX – converts text files (\.tex) to PDF
Tight integration into the submission process – today's talk

\LaTeX XML <https://math.nist.gov/~BMiller/LaTeXML/>

Converts same text files to HTML

Separate talk

T_EX documents from 30+ years

- ▶ About 90% of the submissions are in (La) $\text{T}_\text{E}\text{X}$
- ▶ PDF data is considered generated, and needs to be recreated at times
- ▶ Many submissions rely on additional packages that arXiv came to provide over the years (and where not available in the normal $\text{T}_\text{E}\text{X}$ distributions)
- ▶ (not to speak of all the concoctions that authors sometimes do, including myself)

$\text{T}_{\text{E}}\text{X}$ installations we still have in active use:

- ▶ $\text{t}_{\text{E}}\text{X}$ 2 and 3
- ▶ $\text{T}_{\text{E}}\text{X}$ Live: 2009, 2010, 2011, 2016, 2020, 2023

Compilation is done by Auto $\text{T}_{\text{E}}\text{X}$...

- ▶ Perl system developed over 30+ years
- ▶ tightly coupled with the submission process and kicked off by the web server
- ▶ detects format by parsing a few lines
- ▶ tries all not-rejected formats compilation, first successful wins
- ▶ supported formats:
 - ▶ \LaTeX with dvips/ps2pdf or pdf \LaTeX route
 - ▶ Plain \TeX with dvips/ps2pdf route
- ▶ \LaTeX runs are repeated until stable, plain \TeX is only run once
- ▶ all created PDF files are put together via pdfpages

- ▶ No support for lua \TeX or Xe \TeX or any other engine
- ▶ No support for bib \TeX /biber, bbl files must be uploaded
- ▶ No support for makeindex
- ▶ Merging with pdfpages breaks hyperlinks in documents
- ▶ Detection of main document is often incorrect (conference templates are often uploaded together with actual paper)
- ▶ arXiv watermarking is fragile
- ▶ ... (probably soo many other problems I haven't seen till now)

- ▶ No support for lua \TeX or Xe \TeX or any other engine
- ▶ No support for bib \TeX /biber, bbl files must be uploaded
- ▶ No support for makeindex
- ▶ Merging with pdfpages breaks hyperlinks in documents
- ▶ Detection of main document is often incorrect (conference templates are often uploaded together with actual paper)
- ▶ arXiv watermarking is fragile
- ▶ ... (probably soo many other problems I haven't seen till now)

not to speak of the self-inflicted pain due to incorrectly moved/configured installations

arXiv is currently in a complete restructuring process, modernizing practically all parts of the system.

Parts of the new \TeX backend system:

- ▶ dockerized \TeX to PDF conversion system, which allows for a certain restricted set of parameters
- ▶ older TeX systems will be dockerized together with AutoTeX, but new ones will use a Python API / web application
- ▶ auto-dispatch to respective year TL container depending on submission date

Advantages we get from leaving AutoTeX behind and rewriting ...

- ▶ less magic, clear code paths
- ▶ reproducible builds
- ▶ better watermarking (switch to pymupdf)
- ▶ better PDF composition (using gs which preserves hyper links)
- ▶ no additional files (classes, styles) provided on top of what T_EX Live provides

High on our wishlist to be implemented as soon as we have made the transition to the cloud and the new docker based system:

- ▶ Easy and painless submission process for papers to arXiv!

High on our wishlist to be implemented as soon as we have made the transition to the cloud and the new docker based system:

- ▶ Easy and painless submission process for papers to arXiv!
- ▶ Support for Lua \TeX and Xe \TeX
- ▶ Support for bibliographies and indices (no need to ship pre-made .bbl files!)
- ▶ Generally available (OSS) \TeX to PDF docker web service/API as basis for other systems/services

Big big thanks to

- ▶ all the developers of tools that flow into T_EX Live
- ▶ the developers of T_EX Live itself
- ▶ the Island of T_EX team providing docker images
